

HELPLYAIR

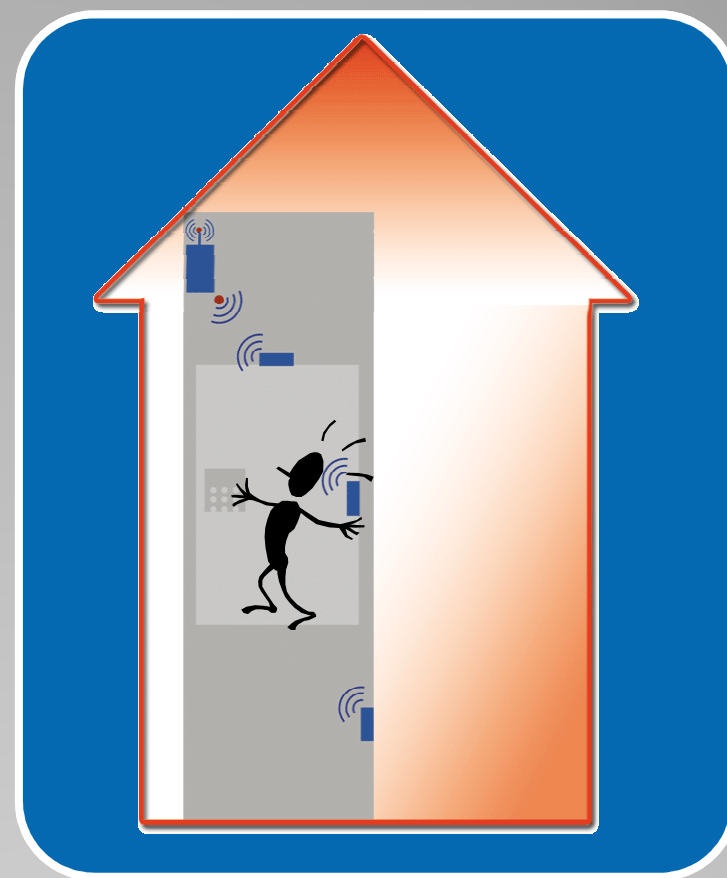

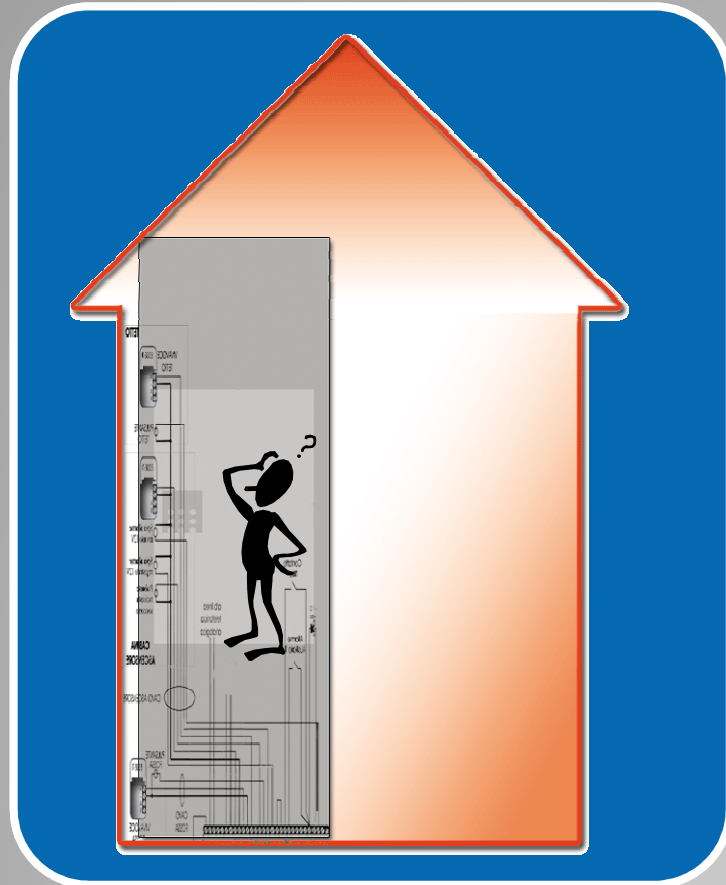

Go Safe Go Wireless

Innovating emergency-call systems for elevators

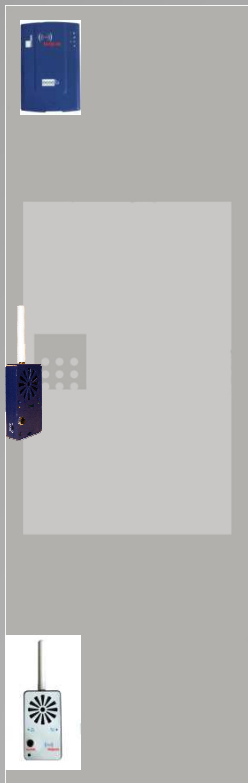

Alarm systems evolution

WHERE ARE WE GOING?

BASE STATION

to be placed where GSM signal is guaranteed

- Up to 50mt from satellite terminals

BASIC SATELLITE

- Full-duplex 2-way communication
- Battery-powered

CAR SATELLITE

- Full-duplex 2-way communication
- Battery-powered

PIT SATELLITE

- Full-duplex 2-way communication
- Battery-powered
- External connections not required

KEY SATELLITE

- Communications with satellites or remote users
- Battery-powered
- External connections
- Parameters Setting
- System check
- Alarms reset

System elements

Wireless connection between satellites and base station:

- Reduced installation and maintenance times
- Cabling cost reduction
- Mistake-proof :no risk for cabling interruptions – false contacts – cabling damages
- Self-diagnosis for constant check of connection between base station and the satellite terminals

Satellite terminals connected via radio-link

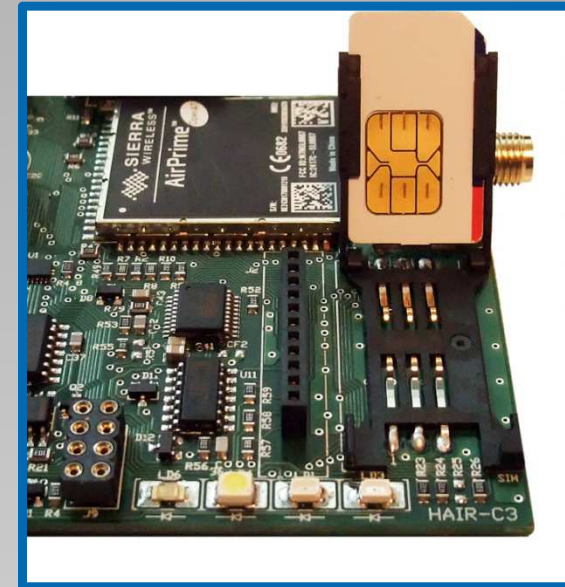

Battery-powered satellite handsfree terminals:

- No need for mains cables
- Interference-free
- No restrictions caused by cabling and/or space
Each satellite may be placed anywhere , thanks to the battery power and radio-link

Battery power

ALL-IN-ONE autodialer and GSM gateway:

- Reduced dimensions
- User-friendly : no additional equipment required in terms of extra power supply or connections

Fully-integrated alarm system

- Helpy Air is totally designed and manufactured by Esse-ti , ensuring customers top performances and utmost reliability as per all Esse-ti alarm systems
- Helpy Air has been specifically designed as an evolution of Esse-ti's wired systems, keeping unchanged all previous parameters and operation modes. This ensures installers' peace-of-mind.

Esse-Ti Standard

Special elevators or modernizations

- Where cabling is missing or complex

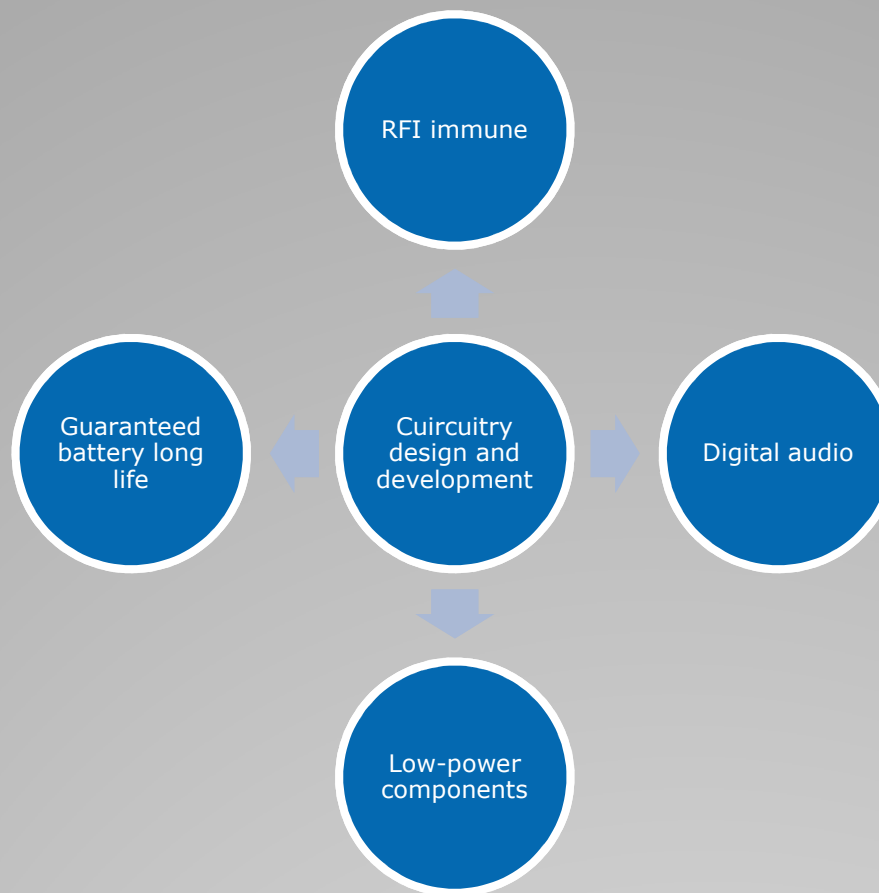

Replacement of obsolete alarm systems

- Does not require to disinstall existing obsolete equipment nor to check existing cabling. All you need is to place the new Helpy Air components.

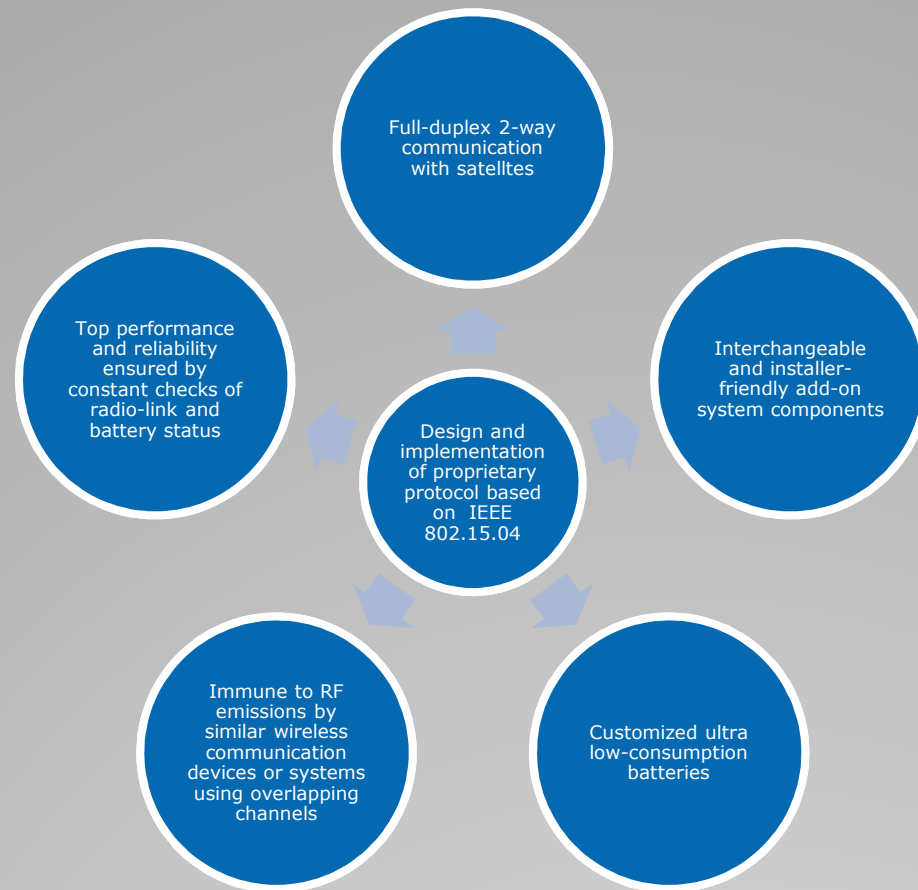

In case of damage or interruption of existing cable

- No time-consuming activities to detect and repair the cause of damage
